

Scanned Task - About Me

Reflection

About me - Scanning task. First we gathered items to scan that represented you. I chose drumsticks, earphones, the logo of PBS radio station and Triple J. All were items that represent my love of music. Leaves represented the environment. I also gathered my favourite pens and printed an image of a cricket bat. This was all arranged into letters spelling out 'Ben'. As some of my objects had text on them, when they scanned they were laterally inverted. To combat this, I selected the item and copy and pasted the item onto a new layer. I then reversed the image again to make the text readable. This editing procedure made for most of all my layers. You will also be able to see this difference between the original and edited images. I also used a number of filters from the filters gallery. To apply these effects and filters to desired items, I had to make a selection. I used a number of tools for selections. Examples were the magnetic lasso tool, magic wand and rectangular marque tool. As for filters, 'glowing edges' looked cool and I used this on my image of seagull rock. I also used the 'splatter' filter on the Triple J logo and found the coloured pencil effect on the PBS logo worked well.
